

Ankit Kumar

Full Stack Developer

New Delhi | +91 80061 81716 | ankitk8006@gmail.com | linkedin.com/in/ankitkumar02

SUMMARY

Full Stack Developer with 1 year of experience building production-ready web applications using Next.js, React, TypeScript, Node.js, Express.js, MongoDB, and PostgreSQL. Skilled in developing secure REST APIs, optimizing application performance, and deploying cloud-native applications using Docker and CI/CD. Working knowledge of Java and Python, including hands-on experience building backend services with FastAPI, Spring Boot, Hibernate, and microservices architecture. Passionate about AI-powered applications and modern engineering practices.

TECHNICAL SKILLS

Languages: Java, Python, TypeScript, JavaScript

Frontend: React, Next.js, Tailwind CSS

Backend: Node.js, Express.js, FastAPI, Spring Boot, Hibernate, Microservices, REST APIs, GraphQL

Databases: MongoDB, PostgreSQL, MySQL, Redis

Cloud & DevOps: Docker, Git, Jenkins, CI/CD, AWS, Nginx

AI: OpenAI API

EXPERIENCE

Full Stack Developer | Greatwits Services Pvt. Ltd. | Jun 2025 – Present

- Developed web applications using Next.js, React, TypeScript, Node.js, and MongoDB.
- Designed reusable UI components, reducing feature development time by 30%.
- Built secure REST APIs with JWT authentication and role-based authorization.
- Improved page performance by 45% using Server Components, code splitting, caching, and image optimization.
- Optimized MongoDB queries, reducing API response times by 35%.
- Containerized applications using Docker and automated deployments with Jenkins CI/CD.
- Integrated OpenAI APIs for searching and extracting text from digital documents.

PROJECTS

Smart Auto Dialer

Duration: Jan 2026 – Present **Role:** Full Stack Developer

Technology: React.js, Express.js, Node.js, MongoDB, JWT

Predictive dialing platform that uses statistical algorithms to call a list of numbers before agents become available, analyzing metrics like average call duration and connect rates to predict when an agent will finish a call and dial the next number so it connects the moment they hang up.

- Designed and implemented backend logic to ensure efficient, large-scale data handling.
- Built integrations with telephony APIs (Twilio) to receive real-time call events and raw audio/data streams.
- Developed scalable server-side services using Node.js to parse raw call logs and apply lead qualification algorithms.
- Designed and optimized MongoDB schemas to efficiently store filtered lead information and historical call data.

SmartWear (E-Commerce)

Duration: Jun 2025 – Dec 2025 **Role:** Full Stack Developer

Technology: React.js, Express.js, Node.js, Redux, Tailwind CSS, MongoDB, JWT

Responsive e-commerce web application enabling users to search and browse products across multiple categories, save products, place orders, and manage order history, integrated with a secure payment gateway for reliable transactions.

- Designed and implemented a product catalogue, order management system, and secure payment workflow to enable seamless transactions and enhance user engagement.
- Developed multi-role functionality (User, Seller, Admin) to streamline product listings, order processing, and platform operations.
- Ensured scalability, security, and usability across all modules, optimizing performance for diverse user roles.

AI Document Assistant (Personal Project)

Role: Developer

Technology: Python, FastAPI, OpenAI API

Personal project exploring AI-integrated backend development: a Python service that exposes FastAPI endpoints to send documents to the OpenAI API and return structured responses (e.g., summaries or extracted information).

- Built and exposed REST endpoints using FastAPI to handle document input and AI-generated responses.
- Integrated the OpenAI API for natural language processing tasks such as summarization and information extraction.
- Used the project to build hands-on familiarity with Python backend development as a complement to existing Node.js/Express expertise.

Backend Microservices Project (Personal Project)

Role: Developer

Technology: Java, Spring Boot, Hibernate, Microservices, REST APIs

Personal project exploring Java backend development at a larger scale: multiple Spring Boot services communicating over REST, using Hibernate for ORM and persistence, built to gain hands-on experience with microservices architecture alongside existing Node.js/Express expertise.

- Designed and implemented multiple Spring Boot services following microservices principles, with REST-based communication between services.
- Used Hibernate for entity mapping and database persistence across services.
- Used the project to build hands-on familiarity with Java microservices architecture as a complement to existing full-stack experience.

EDUCATION

Master of Computer Applications | 7.03 CGPA | 2023 – 2025 | Dr. APJ Abdul Kalam Technical University

Bachelor of Science | 5.50 CGPA | 2018 – 2021 | Dr. Bhimrao Ambedkar University
